NOTE

- 1. Each output can provide up to maximum load, but total load can not exceed rated output power.
2. Line regulation is measured from low line to high line at rated load.
3. Load regulation is measured from 20% to 100% of rated load at 24VAC input.
4. Ripple & Noise are measured with 20MHz oscilloscope at 24VAC by using a 20cm long 12" twisted pair-wire with a 0.1uF/630V metal capacitor & a 47uF electrolytic capacitor parallel on the test point.
5. Efficiency is measured at rated load and 24VAC input.
6. Hold-up time is measured at rated load and 24VAC input.
7. Output Voltage Adjustable is measured on 5% of rated load.
8. When placing an order, model name is composed of "series name" and "model name on top of the specification form". For example, model name of 24I-05 of the order on top of the specification form is DAD1030D24I-05.
9. Reign Power reserve the right to change specifications at any time without notice.
